

Car park control

We offer you solutions that combine people and technology to control and manage your car parks. This includes counting vehicles, electronically checking number plates, collecting payment and, if necessary, issuing fines.

Are you responsible for a car park and its security?

We can help you prevent theft, vandalism and acts of aggression, and we can also respond by taking action. We offer access management systems including surveillance cameras, badges and number plate recognition. These systems deliver images and data that allow us to interact and take action.

After analysing your needs, we can offer you a security solution consisting of on-site security guards or mobile solutions, as well as technological systems that provide:

- Digital management of warnings and complaints
- Management of permits for each parking space using number plates
- Management of vehicle parking time in a given parking space
- Automatic number plate recognition
- Reports with photos and GPS position in real time
- Detailed offence statistics by vehicle
- Time-saving administration platform

In addition, we can help keep your users safe using surveillance cameras connected to our Security Operations Centre (SOC).

Our remote surveillance agents act quickly and remotely if necessary.

Key benefits:

- Analysis and advice
- Global solution with a single point of contact
- Comprehensive safety concept combining technology and people
- Reliable, high-performance solutions
